

Amendments to the Claims:

Listing of Claims

1. (Currently Amended) A method of making ready for presentation a graphical element in a computer application program by communicating with a computer operating system, the method comprising:

executing a first procedure for measuring the element, wherein the first procedure at least determines whether the element has one or more children and determines a size for the element based on an element type for the element when the element has no children;

executing a second procedure for arranging the element; and
wherein the second procedure is invoked and executed independently from the first procedure.

2. (Original) The method of claim 1, wherein the first procedure returns a desired size for the element.

3. (Original) The method of claim 2, wherein the first procedure computes desired sizes for child-elements of the element.

4. (Original) The method of claim 2, wherein the first procedure comprises determining whether a child-element requires computation of its desired size.

5. (Original) The method of claim 1, wherein the second procedure computes a final size for the element.

6. (Original) The method of claim 5, wherein the second procedure further computes display positions for a child-element of the element.

7. (Original) The method of claim 1, further comprising signaling the element's need to be measured by the first procedure.

8. (Original) The method of claim 7, wherein the signaling step comprises calling a measure invalidation function.

9. (Original) The method of claim 8, wherein the signaling step further comprises setting a flag on the element.

10. (Original) The method of claim 7, wherein the signaling step comprises notifying the operating system.

11. (Original) The method of claim 7, wherein the signaling step comprises notifying the element's parent-element.

12. (Original) The method of claim 7, wherein the element requests the measuring of all elements needing to be measured.

13. (Original) The method of claim 1, further comprising signaling with a signal an element's need to be arranged by the second procedure.

14. (Original) The method of claim 13, wherein the signal comprises calling an arrange invalidation function.

15. (Original) The method of claim 14, wherein the signaling step further comprises setting a flag on the element.

16. (Original) The method of claim 13, wherein the element requests the arranging of all elements needing to be arranged.

17. (Currently Amended) A set of executable procedures callable by a computer application program for making ready for presentation a graphical element, including at least:

a first procedure for measuring the element;

a second procedure for arranging the element, wherein the second procedure at least determines whether the element has one or more children and performs internal arrangement functions on the element when the element has no children; and wherein the first procedure and the second procedure are used to manage a layout of one or more graphical elements, and the second procedure is called and executed independently from the first procedure.

18. (Original) The set of procedures of claim 17 wherein the first procedure returns a desired size for the element.

19. (Original) The set of procedures of claim 17 wherein the second procedure computes a final size for the element.

20. (Original) The set of procedures of claim 17 further including at least a procedure for signaling the element's need to be measured.

21. (Original) The set of procedures of claim 17 further including at least a procedure for signaling the element's need to be arranged.

22. (Original) The set of procedures of claim 17 further including at least a procedure for signaling to a parent element the child element's need to be measured.

23. (Original) The set of procedures of claim 17 further including at least a procedure for requesting the measurement of all elements needing to be measured.

24. (Original) The set of procedures of claim 17 further including at least a procedure for requesting the arrangement of all elements needing to be arranged.

25. (Currently Amended) A data structure for facilitating making ready for presentation a graphical element, the data structure comprising:

a first value representing the desired size of the element, wherein the first value is determined at least by determining whether the element has one or more children and by an element type for the element;

a second value representing the computed size of the element;

a first flag for triggering measurement of the element; and

a second flag for triggering arrangement of the element.

26. (Currently Amended) A system for making ready for presentation a graphical element, the system comprising:

a data structure representing the element;

a first executable procedure using the data structure for measuring the element, wherein the first executable procedure at least determines whether the element has one or more children and determines a size for the element based on the an element type for the element when the element has no children; and

a second executable procedure using the data structure for arranging the element.

27. (Original) The system of claim 26 wherein the data structure comprises:

a first value representing the desired size of the element;

a second value representing the computed size of the element;

a first flag for triggering measurement of the element; and

a second flag for triggering arrangement of the element.

28. (Original) The system of claim 26 wherein the first executable procedure returns a desired size for the element.

29. (Original) The system of claim 28 wherein the first executable procedure computes desired sizes of child-elements of the element.

30. (Original) The system of claim 26 wherein the second executable procedure computes a final size for the element.

31. (Original) The system of claim 30 wherein the second executable procedure further computes display positions for a child-element of the element.

32. (Original) The system of claim 27 further comprising an executable procedure using the first flag for signaling the element's need to be measured by the first executable procedure.

33. (Original) The system of claim 28 further comprising an executable procedure using the second flag for signaling the element's need to be arranged by the second executable procedure.

34. (Currently Amended) A computer-readable medium including computer-executable instructions facilitating making ready for presentation a graphical element in a system, computer-executable instructions executing the steps of:

calling a measuring procedure to measure the element, wherein the measuring procedure at least determines whether the element has one or more children and determines a size for the element based on the an element type for the element when the element has no children;

calling an arranging procedure to arrange the element, wherein the arranging procedure at least determines whether the element has one or more children and performs internal arrangement functions on the element when the element has no children; and
wherein the measuring procedure is called and executed independently from the arranging procedure.

35. (Original) The computer-readable medium of claim 34, wherein the measuring procedure returns a desired size for the element.

36. (Original) The computer-readable medium of claim 35, wherein the measuring procedure computes desired sizes for child-elements of the element.

37. (Original) The computer-readable medium of claim 35, wherein the measuring procedure comprises determining whether a child-element requires computation of its desired size.

38. (Original) The computer-readable medium of claim 34, wherein the arranging procedure computes a final size for the element.

39. (Original) The computer-readable medium of claim 38, wherein the arranging procedure further computes display positions for a child-element of the element.

40. (Currently Amended) A method for measuring for presentation a graphical element in a computer application program, the method comprising:

- receiving an available size parameter for the element; and
- causing a measuring function to provide a desired size result parameter for the element, using the available size parameter, wherein the measuring function at least determines whether the element has one or more children and determines a size for the element based on the an element type for the element when the element has no children.

41. (Currently Amended) A method for arranging for presentation a graphical element in a computer application program, the method comprising:

- receiving a final size parameter for the element; and
- causing an arranging function to provide a computed size parameter for the element, using the final size parameter, wherein the arranging function at least determines whether the element has one or more children and performs internal arrangement functions on the element when the element has no children.

42. (Original) A method for notifying that a first graphical element requires measurement for presentation in a computer application program, the method comprising:

- receiving the first element as a child parameter; and
- causing a notification function to notify a second graphical element of the first element's need to be measured, using the child parameter.
